

Stats_Ram::ScalarBase
< Average >::print

Stats_Ram::VectorBase
< Vector, Scalar >::print

Stats_Ram::Stat::printname

```
graph LR; A["Stats_Ram::ScalarBase< Average >::print"] --> C["Stats_Ram::Stat::printname"]; B["Stats_Ram::VectorBase< Vector, Scalar >::print"] --> C;
```

The diagram illustrates a delegation pattern. Two separate print methods, one for ScalarBase and one for VectorBase, both delegate their execution to a single printname method located within the Stats_Ram::Stat namespace. The arrows indicate the flow of control from the specific print methods to the shared printname method.
